DETAILED ACTION

Drawings

1. The drawings are objected to because element 15, in Figure 2 labeled “RadonTransformation” does not have any functional relationship with the other elements. Additionally, in Figure 1 the labels “Projektion Display and User Interface” and “Abstraktion Unit” should be changed to “Projection Display and User Interface” and “Abstraction Unit” respectively. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Specification

2. The statement made on page 1 of the specification, under the heading “Cross-References to Related Application” and before the heading “Background of the Invention” should be deleted.

Claim suggestions

3. The limitation “The process according to claim 10, wherein additional properties are color values, image brightness, and at least one of variance and class form” recited in claim 11 would be in proper form if rewritten as “The process according to claim 10, wherein “said” additional properties are color values, image brightness, and at least one of variance and class form”.

Claim Objections

4. Claim 1 is objected to because of the following informalities: the limitation “referencing to individual image points the classification obtained in the transformation space” recited in step (e) appears to be grammatically incorrect. Likewise, the limitations “additional properties of obtained classifications are calculated” recited in claim 10 appear to be grammatically incorrect. Appropriate correction is required.

Claim 13 recites the limitation “A computer program that is loadable into memory of a digital computer and having a software code for performance of a process with the steps according to claim 1 when said software code runs on said computer” and is improper. The claimed language should be changed to “A computer program that is stored in a computer readable medium/memory of a digital computer and having a software code for performance of a process with the steps according to claim 1 when said software code runs on said computer”. A similar change should also be made to claim 14. Appropriate correction is required.

Claim Rejections - 35 USC § 112

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

6. Claim 1 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 1 recites the limitation “dividing a whole normalized transformation space into classes . . .” in step (d). While the prior claim language recites “the normalization of individual transformation results”, it is unclear where the whole normalized transformation space came

from. Additionally, claim 8 recites the limitation “wherein sequences of transformations, normalizations and classifications are determined during the interaction are stored”, and it is unclear where the determined features are suppose to be stored. Please clarify.

Since claims 2-15 directly or indirectly depend on claim 1 they are also rejected under 35 U.S.C. 112, second paragraph, for the same reason set forth above for claim 1.

Conclusion
